Description of Proposed Activity

Description of Proposed Activity

Congregation Beth-EL, Inc. has submitted an application to the Town of Waterford Conservation Commission requesting approval to conduct regulated activities within an inland wetland and within 100-feet of an inland wetland associated with the construction of a new synagogue.

The planned improvements consist of a 3,760 square foot footprint synagogue and 180 square foot footprint storage building, and associated driveway, parking area, sidewalk, waste and recyclables receptacle enclosure, building utility services, stormwater management facility, exterior lighting, signage, and landscape improvements.

The buildings will be served by the Town of Waterford municipal water and sanitary sewer systems and public communication, and electric utilities located within the Kenyon Road right-of-way. All utilities will be installed underground.

The site work associated with the project includes erosion and sediment control, site preparation, clearing and grubbing, mass earthwork, building foundation, trenching, backfilling, grading, sanitary sewer, water, communication and electric utility, exterior lighting, sidewalk, paving, pavement markings, signage, landscape and turf establishment construction.

Earth fill is proposed to be placed within approximately 450 square feet of an inland wetland associated with the construction of a stormwater infiltration area and the improvements within the 100-foot inland wetland upland review area include buildings, parking area, sidewalk, waste and recyclables receptacle enclosure, building utility services, stormwater infiltration area, exterior lighting, and placement of fill and grading.
